Whitespace Tracking
Overview

What is it?

Whitespace Tracking accurately tracks mobile devices' positioning, movements and activities.

This information is presented through the software's dashboard, providing a clear summary of the devices' performances.

How does it work?

The app is installed on the council's mobile devices where it can monitor their location and status during working hours, including the duration of stops and entry or exit from predetermined geofenced zones.

Triggers can be set for specific activities that automatically send emails to key members of staff and record data in a report, which can then be exported in PDF, HTML and CSV formats.

Features

- Monitor your devices' performance against KPIs

- Set notifications to trigger specific activities

- Build and schedule custom reports

- Tracking history can be viewed up to a year

- Set working hours schedule to respect privacy of teams

- Separate devices into groups or teams

Key benefits

Efficient working practice

Set notifications and automate tasks

Monitors performance

Make informed decisions

Collects accurate information

Build custom reports
